## FAQ

### Q. [eSIM] What is an eSIM?

A. eSIM stands for 'Embedded SIM' and it refers to the SIM that is built within the phone. Existing SIM can be removed from the device, but the eSIM is embedded in the phone permanently and user profiles are downloaded by mobile network providers to operate the eSIM.

### Q. [eSIM] Can I purchase eSIM before visiting Korea?

A. You can purchase it in advance, but it can be activated and used in Korea only. Please contact us if there are any changes to the selected usage date.

### Q. If I only need data, which product can I use?

A. You could rent a portable Wi-Fi, or purchase a Data SIM or eSIM. While the portable Wi-Fi requires the payment to be settled upon return, the Data SIM or the eSIM do not need to be returned once it has been paid off upon purchase.

### Q. Which SIM should I buy? Data SIM? eSIM?

A. Both the Data SIM and eSIM allow you to use data as well as phone/text service on your own phone in Korea. The Data SIM can be activated immediately at the airport, and the eSIM can be used immediately scanning the QR Code sent to you upon purchase without an additional activation procedure. However, please ensure that you check the eSIM compatibility before purchasing it.
